

REMARKS

In accordance with the interview of May 25, 2010, the formal amendment has been filed herewith. Cooperation and advice by the Examiner and Supervisor at the interview are appreciated.

The present amendment is the same as proposed at the interview though "the"(second occurrence) on line 2 of claim 11 has been amended to "a" at this time in view of the antecedent basis. No other change is made.

Incidentally, the identification of "JIS K5600" in claim 11 and the specification (page 9, line 40) has been corrected to "JIS K5400", because of translation error. Namely, in paragraph 0025 of the original international application, it is written as JIS K5400, but when the specification was translated, such portion was inadvertently written as JIS K5600 by mistake. Therefore, the correction has been made. Please accept the correction.

In the amendment, the invention has been amended to the multicolor glass container, wherein a multilayer film comprising a first layer and a second layer laminated alternately is deposited on a hardened coating film disposed on an external surface of the base container. The glass container now amended is disclosed in the original specification and drawings.

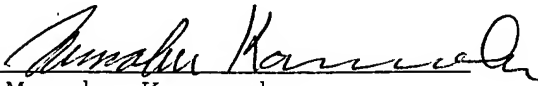

Koike et al. and Sternbergh cited in the Office Action are not directed to a glass container, and does not disclose or suggest the features of the invention now clearly defined in claim 1. Claims now amended are not disclosed or suggested in the cited references.

If any further amendment is necessary or appropriate to properly define the invention, please contact the undersigned agent.

Serial No. 10/586,163

Respectfully Submitted,

KANESAKA BERNER & PARTNERS
